EVERBEARING STRAWBERRY

**EXCELS IN GROWING,
BEARING and TASTE-
TEMPTING FEATURES**

STANDS EVERY TEST

New Brilliant is, without doubt, the most amazing Everbearer we have ever seen. Where many varieties fail due to droughts or excessive rains, Brilliant will thrive and continue to produce its usual enormous load of fine fruit. Being a product of the far North, the plants are very hardy and will succeed under most unusual handicaps. We have seen them do equally well on thin, sandy soil, heavy clay and raw muck. On fertile, sandy loam their vigor is almost unbelievable.

YIELDS 7000 QUARTS PER ACRE

Out of tests made with several new and many old everbearing varieties, Brilliant won all records for BIG YIELD and PERFECT BERRIES. Brilliant achieved the amazing production record of 7000 quarts of berries per acre — 2000 quarts more per acre than any other variety tested. It is the only everbearer that makes a solid fruiting row against all odds of weather, and keeps fruiting steadily all summer and fall. Brilliant is a 100% perfect polenizer and matures every berry to full size, uniform shape and even color. You get 40% greater yield from your acreage when you plant Brilliant!

**Best for home
garden
plots**

**Big money-maker
for commercial
growers**

MATCHLESS QUALITY and FLAVOR

Brilliant berries are so bright and appetizing you can almost taste them before they reach your mouth. The flavor is an outstanding accomplishment — rich and tangy but lacking in the acidity so common in everbearers; so tasty and juicy you can enjoy them before fully ripe. The flesh is of firm texture and solid throughout; the color is brilliant red clear through. Brilliant berries are so attractive, they are always in demand and bring top prices on the market. A superior berry for every home use, and a real money-maker for the commercial grower.

TRY BRILLIANT Ripe Berries in 6 Weeks

Brilliant is the quickest berry maker you ever saw! The plants are so thrifty and vigorous, that unlike other everbearers, the very first blossoms can be left right on to bring you perfect berries just a few weeks after the plants are set out. And they keep right on bearing big, luscious, perfect berries continuously all season.

Give these SUPER-BEARERS a chance to work for you this year! Grow all the berries you want for home use and supply your local market through the fall months — at a nice profit. Get the most from your soil this year by planting Brilliant this spring. Order your plants now.

You will find that trees and plants grown the Emlong way will thrive anywhere in the temperate zone if transplanted at the proper time.

We keep in touch with the latest scientific developments in growing and caring for nursery stock, working closely with our State Department of Agriculture, and also with the large chemical and insecticide companies, who run experiments here at our nursery. This enables us to grow better nursery stock more economically so that we can furnish our customers with top quality nursery stock at fair prices.

Giant Blueberries

**GROW THEM IN YOUR GARDEN
GROW THEM COMMERCIALLY NOW**

For a big money-making crop, these giant size, dark-blue Blueberries are without equal. No other fruit bears more abundantly and requires so little care. Even a few bushes will provide the average family with enough fruit all season for fresh desserts and pies, and for canning and freezing. Berries shown here are actual size Jersey variety. They have a mild sweet flavor, and are consistently uniform in size and shape.

The bushes are very ornamental with their huge clusters of Lily-of-the-Valley flowers in the spring and attractive waxy green foliage. They are easily kept in shape and are free from disease. Set bushes 5 to 7 feet apart in soil made acid with peat moss or sulphur fertilizer. Will thrive on dry land. Plant two or more for perfect pollenization.

Blueberries start to bear the third year, increasing in productiveness until the tenth. Our healthy, vigorous plants never fail to yield enormous crops of top quality fruit. Blueberries keep well on the bush and after picking; they retain their firm quality and rich blue color even when shipped long distances. You always get a big return on your investment when you plant Blueberries.

Emlong's MAJOR Blackcap

LEADING NEW BLACK RASPBERRY

For many years we have been watching new varieties of Blackcaps grown and tested, and we have found one that we believe tops all others. Major Blackcap was originated here in Berrien County, Michigan — and by every test it is the leading Blackcap!

Biggest Yields — Biggest Berries

Major yields bigger crops of top quality berries than any other variety. The berries are larger, glistening black, uniformly round, firm textured and extra rich in flavor. They sell at higher prices, therefore, pay better than other blackcap varieties. For profitable commercial crops and for home gardens, we highly recommend Major.

I NEED RA-PID-GRO

PEAT MOSS

A natural soil conditioner. The value of Peat Moss, like any other humus, is largely its great water-holding capacity; it holds 7 to 10 times its weight in water.

When worked into planting soil it holds moisture in reserve for the young plants and stimulates rapid growth. As a mulch it prevents the evaporation of water from ground surface and discourages weed growth. As it rots away it adds humus to the soil. Mildly acid, it is a necessity for acid soil plants.

THE REVOLUTIONARY NEW SOIL CONDITIONER

Now it is possible to economically condition barren soils and convert them into the equivalent of good garden loam. Terra Kem breaks up the soil structure into a multitude of small, loose crumbly pellets. Water and air have free access to this treated soil; hence seeds germinate faster, roots make a healthy deep growth and yields are increased.

Terra Kem crystals are readily soluble in water. One-half pound dissolved in 10 gallons of water will treat 100 sq. ft., with maximum effectiveness. A single application will help establish sturdy stands of turf and flourishing plant life all season long. Terra Kem is non-poisonous and can be applied directly to existing lawns and gardens without affecting the normal functions of plant growth, and with immediate benefits to the soil.

CRAG HERBICIDE 1 WEED KILLER

Save work and keep your garden free from weeds with amazing new Crag Herbicide 1. Kills weed seeds as they germinate; especially recommended for use on strawberries, asparagus, sweet corn and gladiolus.

Crag Herbicide 1 is completely different in its action from most weed control chemicals such as 2, 4-D or contact herbicides, and can be sprayed directly on many established plants at the recommended dosage without causing injury. When in contact with the soil, however, it is changed to an active form which kills or stunts shallow planted germinating seeds as it is taken in through the young roots.

No worry about drift damage when you use Crag Herbicide 1. Just follow directions on the package. The effects last from 3 to 6 weeks.

Sensational MORaine LOCUST

(Plant Pat. No. 836)

FAST GROWING SHADE TREE

It gives us great pleasure to offer this sensational, new shade tree, because we believe the Moraine Locust so perfectly fills the needs of today. For the many new homes which have no shade trees whatsoever, it will provide good shade quicker than any tree we know of, and is superior in many ways to other fast growing trees, and it is easy to transplant.

Grows Anywhere — Long-Lived — Seedless

The Moraine Locust is a hardy, drought-resistant tree that grows successfully on a wide range of soils. It will withstand the same extremes in temperature as the common Honey Locust and is as long-lived. Because the Moraine Locust is sterile, there are no unsightly seed pods to clutter up the lawn; non-fruiting habit also makes for better foliage.

Beneficial to Lawns

The Moraine Locust forms a large, beautifully shaped head, similar in appearance to the American Elm. The finely cut foliage allows enough light to filter through to promote excellent growth of lawns, yet provides shade dense enough to discourage growth of crabgrass. Whether your need is for good shade quickly, or to replace undesirable trees, we believe you will agree the Moraine Locust is the answer. Try a planting this spring.

5 to 6 ft. Whips, \$5.00 each; 2 for \$9.80; 4 for \$19.20.

HYBRID SILVER MAPLE

- NO SEED PODS
- FAST GROWING
- EXCELLENT FOR SHADE

The Silver Maple has been an excellent fast growing shade tree for many years; its only fault was the production and shedding of seed pods that were a distinct nuisance; consequently we have developed a hybrid silver maple that does not produce seeds and grows rapidly into a very fine shade tree: *the supply is limited, order today!*
